Chemco is a world leader in innovative coating solutions in the Protective & Marine Coatings Industry.

Founded in 1982, Chemco International traces its origin back to the Original Glassflake Company, the inventors of glassflake technology in the 1960s. In 1990, the name was changed to Chemco International under new ownership.

Today, Chemco specialise in the design and manufacture of the most advanced polymers for leading edge anti-corrosion coatings utilised worldwide.

These systems have been successfully utilised across all major industries:

- Marine
- Petrochemical
- Offshore
- Food & Beverage
- Industrial
- Power Generation
- Oil & Gas
- Water & Sewage

The delivery of technologically advanced solutions also relies upon quality conscious people. Chemco have invested in a first class team of autonomous, highly motivated and multi-skilled professionals, who together conceive and implement the most advanced solutions to corrosion and abrasion.
Mission
To become the world’s leading Protective & Marine Coatings Company whilst retaining our strong ethos towards innovative and environmentally friendly coating solutions.

Quality
Quality is at the heart of Chemco’s culture; continuous improvement is the core of our philosophy. In products, processes and technical expertise, we set the standard which others follow.

Design
Significant investment in Research & Development enables the company to create and implement innovative coating systems for the most challenging environments.

Service
We have established a unique all-embracing Holistic Service, extending far beyond traditional levels of technical support.
There are three main methods of surface preparation; abrasive blasting, water jetting and mechanical. For decades grit blasting has been the most commonly used surface preparation method; however, in recent years the high cost and environmental impact of grit blasting has forced the industry to look at alternative surface preparation methods.

**GRIT BLASTING**

Abrasive blasting to Sa 2½ will always offer the best surface preparation. This is the method traditionally utilised for all conventional paint systems.

Unfortunately abrasive blasting encompasses a lengthy setup, large labour squads and extensive equipment requirements. Abrasive blasting also involves many time consuming operations; containment, collection, removal and disposal of the grit. Today it is considered a hazardous and costly process which is not permissible in many projects (e.g. Offshore).

**WATER JETTING**

High Pressure (HP) and Ultra High Pressure (UHP) water jetting are gaining popularity due to their cost-effective and environmentally friendly nature. Chemco specify HP water jetting (500-800 bar) as the most efficient, safe and convenient surface preparation method, with standards as low as WJ-3.

One consequence of utilising water jetting is the development of flash rust on the surface; which is problematic for conventional paint systems. Chemco have eliminated this problem by developing innovative wet & rust tolerant technology where flash rust is acceptable.

Chemco’s wet & rust tolerant coating systems have exceptional adhesion to rusty or poorly prepared and wet surfaces (> 1200 psi / 8 MPa).

**MECHANICAL PREPARATION**

Mechanical preparation can be undertaken by various methods:

- Wire Brush
- Scraper
- Chipping Hammer
- Needlegun
- Grinding Discs
- Sanding Discs

Utilising Chemco’s innovative technology allows application on surfaces prepared to standards as low as St 2.
**HEALTH & SAFETY AND ENVIRONMENTAL IMPACT**

H&S and Fire Hazard are significantly reduced by utilising water jetting.

The process is environmentally friendly, allowing other work in the vicinity on live offshore platforms and ships to be carried out without disruption.

---

**REDUCED EQUIPMENT REQUIREMENTS**

Abrasive blasting is a very time consuming and expensive process which requires the following equipment:

- High Volume Air Compressor
- Blast Pot
- Grit Removal
- Extensive Dehumidification & Ventilation Equipment
- High Power Supply

In comparison, water jetting only requires a small portable water jetting machine (e.g. Den-Jet).

---

**SUBSTANTIAL TIME AND COST SAVINGS**

Water jetting and mechanical preparation are now becoming more commonly employed as time and cost saving alternatives to abrasive blasting. It is already a necessary requirement to pressure wash surfaces exposed to saltwater environments to remove salt as part of the grit blasting process. Major savings can therefore be achieved by utilising HP water jetting; preparing the surface and removing salt and other contaminants in a single operation.

Chemco’s innovative wet & rust tolerant technology also enables huge savings to be made through minimising the overall project duration and downtime. These systems allow the coating process to begin immediately after surface preparation on a wet substrate with no delay and no requirement for dehumidification; unlike other moisture tolerant systems where the substrate needs to be almost dry.
Chemco have developed the world’s first solvent-free, wet & rust tolerant coating system that has truly revolutionised the Protective & Marine Coatings Industry. This system exhibits exceptional adhesion to rusty or poorly prepared and wet surfaces and has been proven to significantly reduce the overall time and cost of a project.

These proven advanced speciality coatings have not only passed independent laboratory tests, they have also been approved and used by almost all major shipping companies worldwide with complete success. They are supported by the most comprehensive and transferable guarantees for complete refurbishment, new build and uniquely for patch repair work.

RS 500P is an innovative solvent-free, wet & rust tolerant epoxy universal primer/finish coating system. The system’s long-term performance is based on completely sealing the surface (porous-free film) and arresting the rust totally.

The use of sacrificial fillers enables the system to be applied to surface standards as low as Sa 1, WJ-4 or St 2. RS 500P can be utilised as a one-coat system by brush, roller or airless spray.

RS 500M is a unique solvent-free, wet tolerant, highly chemical resistant, glassflake epoxy single coat/topcoat. Glassflake systems have been utilised for over 30 years in the most aggressive environments as they offer a total barrier against moisture and corrosive ions.

RA 500M can be applied as a topcoat on primers or as a one-coat system with minimum surface preparation standards Sa 2, WJ-2 or St 3.

Epo-chem™ RS 500P and RA 500M combine to make a multi-functional, groundbreaking coating system which has been extensively used for almost all vessel areas:

- All Tank Internals
- Pipework (internal/external)
- Decks (internal/external)
- Accommodation Blocks
- Underwater Areas
- Superstructures
- Cofferdams
- Engine Rooms
- Void Spaces
- Plus many more...

Chemco’s multi-purpose tank lining system comprises of two products offering an innovative solvent-free, wet & rust tolerant solution:

- Epo-chem™ RS 500P (Primer)
- Epo-chem™ RA 500M (Topcoat)

This revolutionary system can be utilised for the following tank applications:

- Sea Water Ballast
- Potable Water
- Grey/Black Water
- Sewage
- Crude Oil
- Refined Oil (Diesel/Petrol)
- Cargo
- Mud/Brine

**SEA WATER BALLAST TANKS**

The application of conventional paint systems in sea water ballast tanks can lead to many problems; shrinkage, porosity, becoming brittle with age, bad edge and weld coverage. Conventional paint systems additionally have extensive equipment requirements necessary for environmental control. Soft coatings are also no longer acceptable due to changes in IMO regulations.

Chemco’s innovative coating system eradicates all traditional sea water ballast tank problems. This solvent-free, wet & rust tolerant system has passed independent tests for IMO Resolution MSC.215(82) for application in sea water ballast tanks on bare steel, shop primed steel and uniquely on wet & rusty steel.

Millions of square metres of this revolutionary coating system have now been applied in sea water ballast tanks by almost all major shipping companies throughout the world.

**CRUDE OIL CARGO TANKS**

Crude oil cargo tanks are now required to be coated with an IMO approved coating system due to changes in regulations.

RS 500P and RA 500M have also passed independent tests for IMO Resolution MSC.288(87) for application in crude oil cargo tanks on bare steel, shop primed steel and on wet & rusty steel.
POTABLE, SEWAGE AND FUEL TANKS

RS 500P and RA 500M provide a coating system exhibiting excellent chemical resistance specifically suitable for application in greywater, blackwater and fuel tanks.

This unique tank lining system has also achieved the following approvals for application in potable water tanks:

- NSF certified for potable water applications
- FDA approved for food contact and potable water

SWIMMING POOLS

These multi-functional coatings can also be utilised as a swimming pool lining due to their versatile characteristics:

- Quick and easy refurbishment (no disruption to vessel operations)
- No grit blasting requirements
- Smooth, seamless and aesthetically-pleasing finish
- Troublesome tile-based systems can be replaced with ease
- Exceptional chlorine resistance
- Long-term maintenance-free performance
EPO-CHEM™ RL 500PF

RL 500PF is a high solids, wet, rust & oil tolerant primer/finish coating system. It has been specifically designed as a one-coat system or as a high performance coating which can be over-coated with coloured topcoats.

This system has been specified and utilised by almost all major marine, offshore, petrochemical and power generation companies.

SYSTEM BENEFITS

- Wet, rust & oil tolerant
- Any surface preparation method can be utilised; abrasive blasting, water jetting or mechanical
- Apply and operate at temperatures up to 150°C
- No humidity or dew point restrictions
- No overcoating limitations
- Good UV resistance and colour stability
- Can be applied in any environmental condition
- Significantly reduces downtime for outdoor contracts
- Exceptional adhesion to wet & rusty surfaces

Introduced in 2001, RL 500PF has been applied over millions of square metres across all industries with complete success.
TIME AND COST SAVINGS GUARANTEED

Substantial time and cost savings can be achieved in many projects by reducing the number of coats; RL 500PF can be utilised as a one-coat system.

RL 500PF can also be applied immediately after surface preparation by water jetting with no delays due to flash rust or wet substrate; the system exhibits outstanding adhesion to wet & rusty surfaces. The unique characteristics of RL 500PF additionally allow this system to be applied in adverse weather conditions.

Further savings can be achieved as RL 500PF can be applied on hot surfaces without process shutdown (e.g. live steam pipes).

HIGH TEMPERATURE APPLICATIONS AND C.U.I.

RL 500PF can be applied to almost all areas of a vessel operating at high temperature. This system has also been extensively used and specified for Corrosion Under Insulation (C.U.I.) with an excellent track record.

For areas where the temperature exceeds 150°C, Hot-cote™ RA 900, a high solids, silicon hybrid coating, can be utilised.

APPLICATION AREAS

RL 500PF exhibits exceptional adhesion on difficult substrates; stainless steel, new or old galvanised steel and exotic metals. The coating is also compatible with many aged paint systems.

The system has been extensively used in the following areas:

- Steam Pipes
- Decks
- Superstructures
- Funnels
- Bulkheads
- Shaft Tunnels
- External Fittings
- All Tank Externals
Industrial topcoats are designed to provide an aesthetically pleasing finish and a protective barrier against UV attack. In the marine and offshore industries, topcoats can also be utilised to colour co-ordinate various structures in accordance with H&S standards.

**EPO-CHEM™ RC 500GTC**

RC 500GTC is a state-of-the-art high performance epoxy acrylic topcoat. This unique system has exceptional chemical and UV resistance for exposed surfaces where colour retention, high gloss and an aesthetically-pleasing finish are required.

The *amine-free* coating was specifically designed for applications where the use of isocyanate-based (polyurethane) products is prohibited (e.g. Offshore).

**APPLICATION AREAS**

RC 500GTC has been extensively utilised for a wide range of applications:

- Tank & Pipe Externals
- Topsides
- Boottops
- Swimming pools
- Bulkheads
- Decks & Balconies
- Funnels
- Cranes

This multi-purpose topcoat can also be applied to areas immersed, semi-immersed or operating at high temperatures.

**CHEMICAL RESISTANCE**

Chemco’s RC 500GTC uniquely offers excellent chemical resistance; unlike conventional topcoats (e.g. acrylic, PU and acrylic PU).

The exceptional saltwater resistance of RC 500GTC makes this system the ideal topcoat for marine and offshore structures.

**EXCELLENT PRODUCTIVITY**

RC 500GTC exhibits outstanding opacity; substantial time and cost savings can be achieved as only a single coat is required to cover dark surfaces with light colours.

A long pot life and short drying time also provide excellent productivity and reduced downtime.
RC 500GTC has been specifically formulated to offer outstanding UV protection in the harsh environments existing in the marine and offshore industries.

Independent tests have proven that RC 500GTC outperforms other market leading topcoats. This system also directly competes with, but does not encounter any of the problems faced by, polysiloxane coatings.

OTHER TOPCOATS

Chemco also offer a wide range of innovative water-based epoxy, acrylic and silicon topcoats for a variety of applications.

RA 500CG is a unique solvent-free, biocide-free, non-toxic, non-stick and scrubbable hull coating utilised as an environmentally friendly and cost-effective alternative to conventional anti-fouling paints.

RA 500CG provides a highly chemical and abrasion resistant barrier with high flexibility and exceptional impact resistance.

The smooth, glossy and non-stick properties make it perfectly suitable as a hull coating.

**FUEL SAVINGS**

Fuel consumption is significantly reduced by utilising this state-of-the-art, innovative, non-stick hull coating which does not provide support for marine growth. Independent trials have shown that Chem-glide™ RA 500CG has exceptional fouling, abrasion and impact resistance.

Chemco uniquely offer specialised hull coating specifications for all vessel types and trading patterns. Contact Chemco’s Marine Technical Department for further details.
LOW COST MAINTENANCE

The hull can be effortlessly cleaned by water jetting and/or soft scrubbing to remove any marine fouling; returning the coating to its original condition.

Areas affected by mechanical damage can be easily and effectively repaired.

ENVIRONMENTAL IMPACT

Conventional paint systems utilised in the marine industry are responsible for over 200 million litres of solvent emissions per year being unnecessarily released into the atmosphere. The harmful biocides and chemicals typically found in these systems are also poisoning our oceans. Strict changes in environmental legislation have already begun to ban hazardous anti-fouling paints.

RA 500CG is an environmentally friendly coating system which does not contain any harmful biocides, chemicals or solvents.

Chemco offer three cargo tank lining systems specifically designed for application within chemical tankers, covering the full pH range from 1 to 14:

- SYSTEM 1: RS 500P & RA 500M
- SYSTEM 2: RE 500P & RW 50
- SYSTEM 3: RB 300 Series

**SYSTEM 1: Epo-chem™ RS 500P & RA 500M**

Solvent-free, wet & rust tolerant, glassflake epoxy coating system providing good resistance to general chemicals; crude oil, refined oil, saltwater and greywater.

This system has been IMO approved for application in sea water ballast tanks and crude oil cargo tanks. It has also been certified by NSF for potable water applications and FDA approved for carrying food and potable water.

**System Benefits:**

- Solvent-free
- Wet & rust tolerant
- Reduced H&S and Fire Hazard
- Excellent resistance to general chemicals
- Major cost savings (reduced labour, surface preparation and equipment cost)
- No humidity or dew point restrictions
- Compatible with all epoxy shop primers and existing tank linings
**SYSTEM 2: Epo-chem™ RE 500P & RW 500**

Solvent-free, rust tolerant, high temperature, glassflake epoxy Novolac system offering excellent resistance to highly aggressive chemicals; ethanol, methanol and caustic soda.

**System Benefits:**

- Solvent-free
- Any surface preparation method can be utilised; abrasive blasting, water jetting or mechanical
- Excellent chemical and high temperature resistance
- Reduced H&S and Fire Hazard
- Reduced overall project cost and downtime
- Environmentally friendly system

**SYSTEM 3: Chem-tect™ RB 300 Series**

100% solid, high quality, glassflake vinylester system offering exceptional resistance to aggressive chemicals at high temperatures; acids and solvents.

**System Benefits:**

- Excellent resistance to aggressive chemicals and high temperatures
- Ideal tank lining system for multi-purpose chemical storage vessels
- Excellent resistance to thermal ageing, severe corrosive and abrasive environments
- Full pH protection (1 – 14)
- Maintenance-free and easy to repair
- Fast curing allowing quick overcoating, fast application and quick back-in-service times
Chem-co’s ceramic systems have been specifically designed using a blend of ceramics and specialised epoxy technologies suitable for the repair and protection of process equipment used in highly abrasive and fluid-flow environments.

System benefits:
- **Solvent-free**
- Extremely hardwearing
- Machinable finish
- Excellent abrasion and erosion resistance
- Improved efficiency
- Exceptional chemical resistance

Chem-cav™ RD 500CT is a solvent-free, flexible anti-cavitation system exhibiting exceptional corrosion, abrasion, erosion and cavitation resistance.

Independent tests have demonstrated the excellent performance of RD 500CT in comparison with the most commonly used metals.

**ANTI-CAVITATION SYSTEM**

Fresh Water, 1mm gap, 75% Power (750W), -790 mV CP
